Productivity growth: an increase of 3.4% in the total number of consultations!

The first balance assessment of 2007, the Hospital Pedro Hispano in Portugal indicates an increase in productivity" refers Nuno Morujão, Chairman of the Board of Directors of ULSM.

The hospital administration, chaired by Nuno Morujão, would rather call it stability of production, but provides some indicators of growth, with an increase of 3.4% in the total number of consultations which resulted in an increase of 9% on average per physician and 1% in the surgery, while extra hours spending fell from 15 to 13% of wages. Health centers, consultations also increased 0.5%.

“These numbers do not reveal that there was an infringement. They only imply that the organization improved and patient pressure increased”, he said. “We only had to make adjustments in schedules and services”, adds Nuno Morujão, who faced the threat of dismissal from service of its directors unhappy with the installation of this system a year ago”.
